Neuter

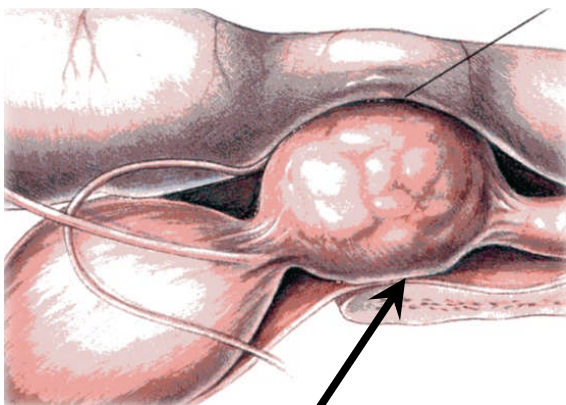

****We recommend neutering as early as 4-6 months of age****

Why should I neuter my pet?

?

1. **Unwanted Pregnancies:** This operation is indicated to prevent your pet from impregnating other female pet.
2. **Neutering reduces male disobedient behavior such as:**
 - Urine marking (smells bad and stains on contact)
 - Territorial aggression (can lead to pet fights, and/or injury to human bystander)
 - Roaming and escape (leading to costly accidents and lost pets)
3. **This operation markedly decreases the risk of acquired and transmissible diseases.**
4. **The neuter operation essentially removes the possibility of testicular cancer and reduces the risk of prostate enlargement.**

Prostatic Hyperplasia
Enlarge Prostate can cause both defecation and urination problems

Testicular Cancer (Sertoli-Cell Tumor)
